## IN THE CLAIMS

1

Please amend the claims as follows:

- 1 (Currently Amended). A photonic bandgap microcavity comprising:
- a <u>flexible</u> membrane structure that can experience strain; and
- a photonic bandgap waveguide element formed on said <u>flexible</u> membrane
- 4 structure having a defect so that when said <u>flexible</u> membrane structure is strained, said
- 5 photonic bandgap waveguide element is tuned to a selective amount.
- 2 (Currently Amended). The photonic bandgap microcavity of claim 1, wherein said
- 2 flexible membrane structure comprises a sub-micron SiO<sub>2</sub> layer.
- 1 3 (Original). The photonic bandgap microcavity of claim 1, wherein said photonic
- 2 bandgap waveguide element comprises a 1-dimensional photonic crystal.
- 4 (Original). The photonic bandgap microcavity of claim 3, wherein said photonic
- 2 bandgap waveguide element comprises a plurality of periodic holes.
- 1 5 (Original). The photonic bandgap microcavity of claim 4, wherein said defect breaks
- the periodicity of said periodic holes.
- 1 6 (Original). The photonic bandgap microcavity of claim 1, wherein said selective
- 2 amount comprises approximately 1%.
- 7 (Currently Amended). The photonic bandgap microcavity of claim 1 further
- 2 comprising at least one actuator that is coupled to said flexible membrane so as to
- 3 produce said strain.

- 8 (Currently Amended). The photonic bandgap microcavity of claim 7, wherein said at
- least one actuator produces strain on said <u>flexible</u> membrane between 0.2 and 0.3%.
- 9 (Original). The photonic bandgap microcavity of claim 7, wherein said at least one
- 2 actuator comprises a top electrode.
- 1 10 (Original). The photonic bandgap microcavity of claim 9, wherein said at least one
- 2 actuator comprises a bottom electrode.
- 1 11 (Original). The photonic bandgap microcavity of claim 7, wherein said at least one
- 2 actuator comprises a PZT piezoelectric actuator.
- 1 12 (Currently Amended). A method of forming a photonic bandgap microcavity
- 2 comprising:

1

- providing a <u>flexible</u> membrane structure that can experience strain; and
- 4 forming a photonic bandgap waveguide element on said flexible membrane
- 5 structure having a defect so that when said flexible membrane structure is strained, said
- 6 photonic bandgap waveguide element is tuned to a selective amount.
- 1 13 (Currently Amended). The method of claim 12, wherein said <u>flexible</u> membrane
- 2 structure comprises a sub-micron SiO<sub>2</sub> layer.
- 14 (Original). The method of claim 12, wherein said photonic bandgap waveguide
- 2 element comprises a 1-dimensional photonic crystal.

- 15 (Original). The method of claim 14, wherein said photonic bandgap waveguide
- 2 element comprises a plurality of periodic holes.
- 1 16 (Original). The method of claim 15, wherein said defect breaks the periodicity of
- 2 said periodic holes.

£.

- 1 17 (Original). The method of claim 12, wherein said selective amount comprises
- 2 approximately 1%.
- 1 18 (Currently Amended). The method of claim 12 further comprising providing at least
- 2 one actuator that is coupled to said <u>flexible</u> membrane so as to produce said strain.
- 1 19 (Currently Amended). The method of claim 718, wherein said at least one actuator
- produces strain on said <u>flexible</u> membrane between 0.2 and 0.3%.
- 1 20 (Currently Amended). The method of claim 718, wherein said at least one actuator
- 2 comprises a top electrode.
- 1 21 (Currently Amended). The method of claim 920, wherein said at least one actuator
- 2 comprises a bottom electrode.
- 1 22 (Currently Amended). The method of claim 718, wherein said at least one actuator
- 2 comprises a PZT piezoelectric actuator.
